

## Fund Description

The AAM S&P Developed Markets High Dividend Value ETF (NYSE:DMDV) is designed to provide current cash flow and adequate capital growth by targeting attractively valued developed international mid and large capitalization stocks that exhibit both a high dividend yield and sustainable dividend distribution characteristics. At the core of DMDV's low cost, tax-efficient, transparent approach are two key valuation indicators that aim to identify sustainable dividend-paying stocks offering fundamental value.

- **Dividend yield** – A high dividend yield may indicate an attractive market price and signal a company's willingness to return capital to its shareholders, which may help meet the cash flow needs of investors.
- **Free cash flow yield** – A high free cash flow means a healthy operating condition and strong balance sheet which may help DMDV avoid value traps among high dividend stocks.

## The DMDV Advantage

1. **Cash Flow:** DMDV targets 55 dividend-paying stocks in the S&P Developed BMI Ex-U.S. & Korea LargeMidCap Index, potentially increasing a portfolio's income and helping investors meet their cash flow needs. As of 10/31/2018, DMDV'S underlying index had a dividend yield of 5.74%.
2. **Capital Growth:** Dividends have played a significant role in equity returns. In fact, approximately 48% of the S&P Developed BMI Ex-U.S. & Korea LargeMidCap Index total return can be attributed to the reinvested dividend and the power of compounding.\*
3. **Sector and Stock Diversification:** DMDV'S distinct index methodology targets five stocks from each Global Industry Classification Standard (GICS) sector potentially providing investors a full range of sustainable dividend opportunities.

This material is not intended to be a recommendation or investment advice, does not constitute a solicitation to buy or sell securities, and is not provided in a fiduciary capacity within the meaning of the Employee Retirement Income Security Act of 1974 (ERISA) and the Internal Revenue Code. The information provided does not take into account the specific objectives or circumstances of any particular investor, or suggest any specific course of action. Investment decisions should be made based on an investor's objectives and circumstances and in consultation with his or her advisers.

Investing involves risk, including the possible loss of principal. Shares of any ETF are bought and sold at market price (not NAV) and may trade at a discount or premium to NAV. Shares are not individually redeemable from the Fund and may be only be acquired or redeemed from the fund in creation units. Brokerage commissions will reduce returns. Companies with high yield or payout ratio may underperform other securities in certain market conditions and reduce or discontinue paying dividends entirely while included in the index. The Fund's return may not match or achieve a high degree of correlation with the return of the underlying Index. To the extent the Fund utilizes a sampling approach, it may experience tracking error to a greater extent than if the Fund had sought to replicate the Index. Investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuation or to political or economic instability. Investments in mid-cap companies may involve less liquidity and greater volatility than larger companies. Diversification does not assure a profit or protect against a loss in a declining market.

Performance data quoted represents past performance; past performance does not guarantee future results. Index performance is not illustrative of fund performance. One cannot invest directly in an index. The Fund is new and has no performance history. Once available, please call 800.617.0004 for Fund performance.

**Definitions:** The price/earnings ratio (often shortened to the P/E ratio or the PER) is the ratio of a company's stock price to the company's earnings per share. The price-to-book value (P/BV) ratio is calculated by dividing the current closing price of the stock by the latest quarter's book value per share. The price/sales (P/S) ratio is calculated either by dividing the company's market capitalization by its total sales over a 12-month period, or on a per-share basis by dividing the stock price by sales per share for a 12-month period. Indicated dividend yield is calculated by multiplying the most recent dividend paid by the anticipated number of dividend payments each year (the indicated dividend) and dividing the product by the share price. Price to cash flow (P/Cash Flow) is calculated as the share price divided by the operating cash flow per share, which adds non-cash earnings such as depreciation and amortization to net income. The S&P Developed BMI Ex. U.S. & Korea LargeMidCap is designed to measure the performance of large- and mid-cap securities in developed markets, excluding the U.S. and Korea. The S&P Developed Ex-U.S. Dividend and Free Cash Flow Yield Index seeks to measure the performance of stocks in developed markets, excluding the U.S. and Korea, that exhibit both high dividend yield and cash flow yield characteristics, while maintaining diversified sector and country representation.

The IOPV is calculated by Solactive AG.
